Arbuz Tatiana

Frontend Engineer (React / Next.js / TypeScript)

Full-Stack Experience • Systems Architecture • Data-Driven Interfaces

Remote (Moldova) · Gmail · Telegram · LinkedIn · GitHub · Website

PROFILE

Frontend Engineer with full-stack development experience focused on building applications with React and Next.js, with an emphasis on UI architecture, data management, and performance (SSR/ISR).
Experience with NestJS, Laravel, Docker, and GitLab CI/CD allows me to work across the full product stack.
I take full responsibility for the product's architectural integrity, keeping the frontend, APIs, and infrastructure working together reliably as a coherent system.

SKILLS & TOOLS

Frontend: React, Next.js (App Ro uter, SSR/ISR), TypeScript, Zustand, Redux Toolkit, SWR.
Architecture: Feature-Sliced Design (FSD), modular structures, server-first data fetching and processing.
UI: Tailwind CSS, MUI, Styled Components, responsive interfaces, ApexCharts / ECharts.
Backend & Integrations: NestJS, Laravel, RESTful APIs, Webhooks, Keitaro API, Telegram Web Apps.
Testing & Quality: Jest, React Testing Library, Storybook, ESLint, Prettier, Lighthouse.
Infrastructure & Processes: Docker, Git, GitLab CI/CD, GitHub/GitLab Flow, Code Review.

EXPERIENCE

DMZ Home Construct · 2025
Frontend / Full-Stack Engineer

Stack: Next.js (App Router, ISR), TypeScript, Payload CMS v3, Tailwind CSS

- Implemented a **headless architecture** using Next.js and Payload CMS, effectively decoupling application logic from content management.
- Designed a **visual block system (page builder)**, allowing non-technical users to build pages from ready-made components.
- Architected a **unified server resolver layer** and optimized data-fetching logic, significantly reducing database query overhead.
- Configured **ISR with granular cache invalidation** (revalidateTag), ensuring near-instant content updates at the speed of static delivery.
- Migrated landing page and news creation to the CMS, enabling one-click publishing without developer intervention.

CPABOX SaaS Platform · 2022 - 2025
Frontend / Full-Stack Engineer

Стек: React, Next.js, TypeScript, NestJS, Zustand, MUI, ApexCharts, Keitaro API, Telegram Web Apps

- Designed frontend architecture and ensured **API-UX consistency** across all platform modules.
- Built complex state management logic using **Zustand**, streamlining data exchange between analytical and operational subsystems.
- Developed a high-performance **analytical dashboard** (ApexCharts + Keitaro API) for visualizing key campaign metrics and conversions.
- Engineered a **Telegram Web App** ecosystem and a **NestJS backend** for domain monitoring (WHOIS), webhook processing, and data synchronization.
- Conducted a comprehensive **UI refactoring using MUI**: unified components, centralized theming, and standardized the design system across the platform.

Remotza.tech · 2021 - 2022
Backend / Full-Stack Engineer

Стек: Laravel (PHP), Vue.js, PostgreSQL, Redis

- Developed **RESTful APIs** and integrations with Laravel, collaborating closely with the UI/UX team.
- Implemented both standalone **SPAs** and **hybrid integrations** of Vue components within Blade templates.
- Optimized database queries and implemented **Redis caching** to reduce load on high-frequency requests.
- Standardized error handling and logging protocols to improve system diagnostics and support efficiency.

AOPSRM · 2020–2021
Full-Stack Developer

Стек: React, Laravel, Docker, GitLab CI/CD

- Developed a multilingual platform featuring a **React frontend** and a custom **Laravel-based** CMS.
- Configured **Docker** and **GitLab CI/CD** for automated builds and production deployments.
- Designed a modular content block system for articles, guides, and news.
- Empowered the organization with **fully autonomous content management**, eliminating the need for developer support in daily publishing.

PROJECTS

Folio Metrics — Open-source (Next.js)
Interactive resume and admin dashboard with a built-in metrics system.

- Features a standalone **JSON demo mode** and a full-scale version with **PostgreSQL and Prisma**.
- Built with a server-first data model and a clean Feature-Sliced Design (FSD) structure.
- Performance: Lighthouse ≥ 93 across all metrics.

Ongoing Product Development — Product Engineer (2025–Present)
Architecting an e-commerce platform on Next.js (App Router).

- Utilizing **FSD** for business logic isolation and a **server-first** architectural approach.
- Developing an **AI-powered age verification module (18+)** and comprehensive admin interfaces for order and content management.
- Managing the full technical cycle: architecture → development → infrastructure.
