Profile

Frontend-oriented Full-Stack Engineer building React and Next.js (App Router, TypeScript) applications with a strong focus on architecture (Feature-Sliced Design), UX and performance (SSR/ISR). Experience with NestJS, Laravel and Docker/GitLab CI/CD helps me design reliable end-to-end integrations and ship scalable features. I care about sustainable architecture, clear UX and automation of repetitive work.

Core Skills

Frontend: React 18, Next.js (App Router, SSR/ISR), TypeScript, Zustand, Redux Toolkit, SWR, forms & validation, error handling, server-driven UI.
Architecture: Feature-Sliced Design (FSD), modular frontends, separation of concerns, server-first data flows, caching & loading strategies.
UI & Styling: Tailwind CSS, MUI, Styled Components, responsive layouts, lightweight design systems, data visualization (ApexCharts).
Backend & Integrations: NestJS, Laravel, REST APIs, webhooks, background jobs, integrations with third-party APIs (Keitaro API, Telegram Web Apps).
Testing & Quality: Jest, React Testing Library, Storybook, ESLint, Prettier, strict TypeScript, basic performance & accessibility audits (Lighthouse).
DevOps & Process: Docker, Git, GitLab CI/CD, GitHub/GitLab Flow, code review practices, Agile/Scrum, product-oriented development.

Experience

DMZ Home Construct — Contract · 2025
Frontend-focused Full-Stack Engineer

Stack: Next.js (App Router, ISR), TypeScript, Payload CMS v3, Tailwind CSS

- Designed and implemented a headless architecture with Next.js App Router and Payload CMS, replacing ad-hoc pages with a modular, schema-driven system.
- Introduced a single registry of server resolvers to avoid cascading API calls and keep data-loading logic in one place.
- Configured ISR and granular cache invalidation (revalidateTag) via a dedicated “Tag Planner”, so editors can safely update content without touching code.
- Automated content and landing-page management, reducing the number of manual operations for the marketing team and making campaigns easier to control.

CPABOX — SaaS platform for traffic arbitrage · 2022–2025
Frontend / Full-Stack Engineer

- Designed the frontend architecture to keep API contracts and UX consistent across dashboards and tools.
- Introduced Zustand for state management, simplifying data flow between modules and reducing coupling between UI components.
- Built and optimized an analytics dashboard using ApexCharts with integration to Keitaro API, improving the clarity of campaign and conversion metrics.
- Developed a Telegram Web App and a NestJS backend for WHOIS checks and domain sync, automating routine checks that were previously done manually.
- Refactored MUI-based UI and theming, increasing UI consistency and making future features faster to deliver.

Stack: React, Next.js, TypeScript, NestJS, Zustand, MUI, ApexCharts, Keitaro API, Telegram Web Apps

Remotza.tech — Custom software development · 2021–2022
Backend / Full-Stack Engineer

Stack: Laravel (PHP), Vue.js, PostgreSQL, Redis

- Developed REST APIs and integrations in Laravel for client projects, working closely with the frontend team on Vue.js components and contracts.
- Optimized database structure and introduced caching with Redis, reducing response times for frequently used endpoints.
- Improved API error handling and logging, making it easier to diagnose production issues and support client teams.
- Contributed to internal best practices for API design and deployment, which helped align multiple projects on a single approach.

AOPSRM — Non-profit helping ostomy patients in Moldova · 2020–2021
Full-Stack Developer

Stack: React, Laravel, Docker, GitLab CI/CD

- Built a multilingual website in React and designed a custom Laravel-based CMS so editors can manage content without developers.
- Set up Docker and GitLab CI/CD to automate testing and deployment, ensuring fast and predictable releases of new materials.
- Implemented flexible content blocks (articles, guides, news), enabling the NGO to adapt the site structure to their communication needs.
- As a result, the organization received a “turn-key” site and CMS and can independently publish materials and communicate with the audience.
